ADITYA SINGH DIKHIT

AI Engineer | GenAI & LLM Application Developer | Prompt Engineering

adityadikhit1801@gmail.com | +91 72239 37583

Portfolio: adityadikhit1801-glitch.github.io | LinkedIn: linkedin.com/in/aditya-singh-dikhit

PROFESSIONAL SUMMARY

AI engineer building production LLM applications end to end — RAG pipelines, LangGraph multi-agent orchestration, prompt engineering and internal AI tooling — including a full enterprise AI platform architected, built and shipped to production on Azure. Strong Python backend engineering: FastAPI, REST APIs, vector databases (ChromaDB, pgvector), Docker, Linux, Azure. Also an SAP ABAP developer with two full-lifecycle S/4HANA implementations delivered, bringing enterprise domain depth to AI products that automate business workflows.

TECHNICAL SKILLS

Large Language Models (LLM), Generative AI, Prompt Engineering, Retrieval-Augmented Generation (RAG), LangGraph, AI Agents, AI Agent Orchestration, Multi-Agent Systems, Agentic Workflows, Human-in-the-Loop Workflows, LLM Application Development, AI Tool Development, LLM API Integration, Natural Language Processing (NLP), OpenRouter, Google Gemini API, Claude Code, Vector Databases (ChromaDB, pgvector), Vector Search, Embeddings, Chunking, OCR, Python, FastAPI, Flask, REST API Development, Backend Development, SQL, PostgreSQL, MongoDB Atlas, Microsoft Azure, Azure App Service (Web Apps), Azure Database for PostgreSQL, Cloud Deployment, Website Development, Canva, Docker, Git, Linux, Selenium, BeautifulSoup, AI-Assisted Development, SAP ABAP, ABAP Reports, ALV, Data Dictionary, Enhancements, SAP S/4HANA, End-to-End SAP Implementation.

PROFESSIONAL EXPERIENCE

Sastrageek Solutions Pvt. Ltd. Aug 2025 – Present

AI Tool Developer & SAP ABAP Intern

- Designed, built and deployed **DAS Author** on Azure — an enterprise AI document-to-deliverable platform that converts mixed-modality source files into 9 finished output formats, **cutting deliverable production time from days to minutes**.
- Engineered the RAG retrieval and source-fidelity layer that keeps LLM output anchored to the supplied source material, removing invented content from generated deliverables.
- Introduced AI-assisted development practices — LLM code generation, automated review and documentation bots — cutting typical **ABAP program development from 2–3 days to about 1 hour**.
- Delivered **two complete end-to-end SAP S/4HANA implementation projects** as an ABAP developer, covering requirement analysis, technical specification, development, unit testing and defect fixing across the full project lifecycle.
- Built custom ABAP reports, ALV, data dictionary objects and enhancements; debugged programs for functional and performance fixes.

PROJECTS

DAS Author | Enterprise GenAI Platform

Python, FastAPI, LangGraph, LLM Agents, RAG, ChromaDB, Azure PostgreSQL (pgvector), MongoDB Atlas, OCR, Docker, Azure App Service — architected and built end to end with AI-assisted development (Claude Code)

- Production time per deliverable, before → after: **narrated video 4–5 days → 40 min**; SCORM training 1.5 days → 5 min; slide deck 1 day → 15 min; infographic 3–4 hrs → 2 min.
- Built the full pipeline — ingestion, chunking, **pgvector search on Azure PostgreSQL**, LangGraph orchestration and format-specific renderers — producing 9 output types (slide deck, SCORM, narrated video, PDF, infographic) from one mixed-modality upload.
- Engineered a deterministic source-fidelity layer that enforces section coverage, verbatim quoting of source data and automatic removal of unstated detail, so generated content stays anchored to the source rather than invented.
- Built an OCR-driven annotation engine that detects UI elements in application screenshots and auto-generates numbered callouts with instructional captions; benchmarked OCR libraries for CPU speed.
- Implemented a human-in-the-loop plan-approval gate with an editable document round-trip, plus checkpoint-based resume so interrupted long-running generation jobs are never lost or re-paid for.

Hermes Agent Suite | Autonomous LLM Agents

Python, OpenRouter (Hermes), Cron, Telegram Bot API, Ubuntu

- Built cron-scheduled autonomous agents that compile and deliver summarized 24-hour multi-domain news digests to Telegram.
- Developed a stock trend analyser computing Z-scores to flag statistically significant price movements.
- Created an SAP work-automation agent returning ready-to-use ABAP code with technical detail, cutting manual effort.

Organisation Website | Design-to-Deployment Web Build

Claude Code, Canva, Azure App Service (Web Apps) — AI-assisted development

- Converted Canva design layouts into the organisation's responsive, production website using AI-assisted development (Claude Code).
- Deployed and hosted the live site on **Azure App Service (Web Apps)**, owning the workflow from design hand-off to go-live.

CERTIFICATIONS

Claude Code in Action — Anthropic (verify) · **Introduction to LangGraph — LangChain Academy** (verify)

SAP ABAP Certification and Interviews with Real-Time Scenarios, Udemy (certificate) · SAP in a Nutshell, Udemy (certificate)

EDUCATION

B.Tech, Computer Science & Engineering — Chandigarh University 2021 – 2025 | 6.81 CGPA

Class XII (CBSE) 74.6% · Class X (CBSE) 80.83% — First Step Sr. Sec. School 2020 | 2018
